# MyNews App Documentation

OpenClassrooms Project 7

Overview

MyNews app is an Android news app that fetches news from The New York Times API and allow users to read their favourite articles from various sections for instance Top Stories and Most Popular articles.
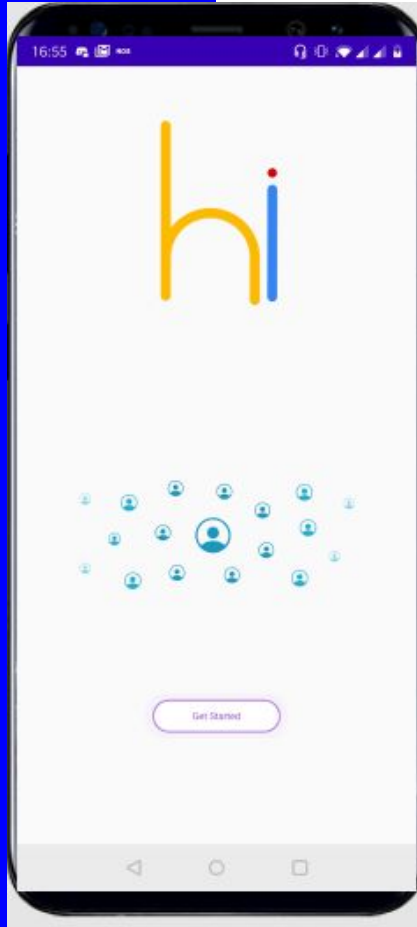

SplashScreen

When the app launches the users are presented with the launch screen using lottie animation library

# Welcome Screen or HiScreen

Here you see another SplashScreen with a cool UI. The app user presses the Get Started button to launch the main app screen

The HomeScreen

01   The Home Screen contains several tabs, including Top Stories, Most Popular, Technology and others.

02   When a MyNews app user clicks on an article, the article will load in different screen, i.e. webview screen.

03   The Navigations Drawer can be opened by clicking on the toggle in the top left corner or by swiping the screen from the left.
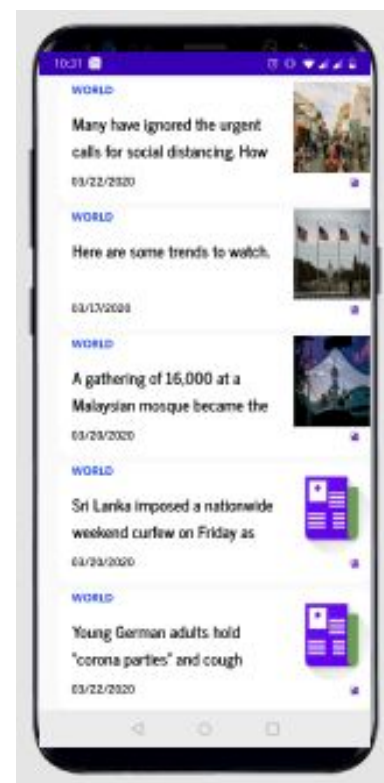

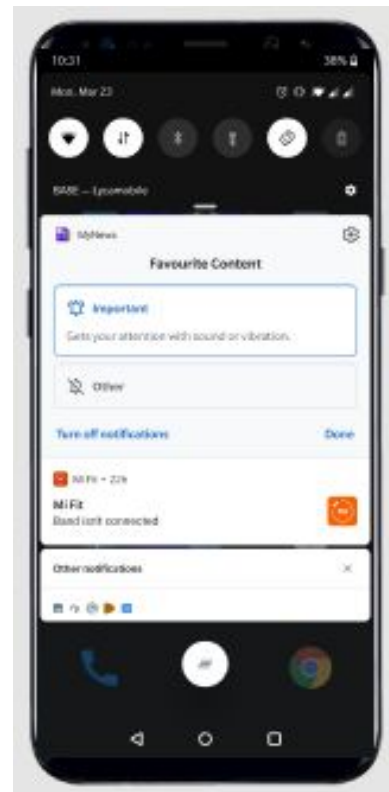

Home Screen

Search and Notifications Screens

01   To search an article the user clicks the search bar icon. The user enters keywords and can filter by dates and categories.

02   To enable notifications the user clicks on the toggle in the top right corner. The user enters the keywords and/or the categories it wishes to receive notifications for. The screen also includes a toggle button to disable/enable notifications.

03   The toggle in the top right corner also includes Help and About.
